Your system is talking. Are you listening?

Oracle Fusion Cloud comes with built-in process flows that work for most organisations most of the time. But every business has its own industry context, local requirements, and cultural ways of working. What was configured at go-live reflected the business at that point in time, and businesses do not stand still.

Processes evolve, data mutates, people come and go. The knowledge behind why something was configured a certain way leaves with the person who set it up. Workarounds become permanent. Scheduled jobs accumulate. Month-end close takes longer than it should, reconciliations do not balance first time, and nobody is entirely sure whether the system is working as designed or just working.

SaaS iQ provides structured health checks across your Oracle Fusion Cloud environment. We assess system configuration against current business requirements, review process efficiency across key operational cycles, period close, reconciliations, procure-to-pay, hire-to-retire, and identify where configuration has drifted from best practice or where the business has outgrown what was originally built.

The output is a prioritised findings report with practical recommendations, not a theoretical maturity model. We tell you what needs attention, what order to address it in, and what it will take.
