Configured for where you operate.

Enterprise SaaS platforms are built for global use, but every organisation operates within local rules. Tax regimes, statutory reporting, country-specific payroll obligations, e-invoicing and regulatory formats all need configuration that reflects where you actually do business.

SAASiQ provides localisation and tax configuration across finance, ERP and payroll platforms, including Oracle, SAP, NetSuite, Workday and Microsoft Dynamics 365. We cover UK and international VAT, withholding tax, Making Tax Digital, country-specific statutory reporting and multi-jurisdiction setup.

Rules keep changing after go-live. New e-invoicing mandates, rate changes and reporting formats arrive on fixed dates, and each one needs testing against your configuration. We keep your platforms in step with that calendar, so changes are in place before the deadline.

Whether you operate in one jurisdiction and need it configured properly, or are expanding into new territories and need your platform ready from day one, we make sure it follows the rules that apply to you.
