The right information, at the right time.

Reporting covers more than dashboards and spreadsheets. It includes transactional output such as purchase orders, invoices, remittances and payment notifications. It also includes management reporting, operational dashboards and regulatory submissions, drawn from ERP, HR and CRM platforms and the bespoke systems around them.

In practice, reporting requirements are not always met during implementation. Priorities shift, timelines compress, and some reports arrive incomplete or not at all. Users adapt with manual workarounds and offline extracts, and the gap between what was specified and what was delivered widens over time.

SAASiQ works with each platform's own reporting tools: Oracle BI Publisher and OTBI, SAP, Workday and Dynamics reporting, Salesforce and Zoho CRM analytics, and Power BI. Where the native tools fall short, we build bespoke reporting that joins data from several systems into one consistent view.

That might be a single transactional document that needs redesigning, a management pack that pulls from several sources, or a full reporting review to close the gaps. We scope it and quote a fixed price before any work starts.
