Stay current. Stay confident.

Oracle releases quarterly updates to Fusion Cloud whether you are ready or not. Each update brings new features, changed behaviours, and potential regression to existing configuration. Without a structured approach, patch cycles become a source of risk rather than an opportunity to improve.

SaaS iQ provides patch management services for Oracle Fusion Cloud customers. We assess each quarterly update against your live configuration, identify what has changed, what is at risk, and what needs testing. The output is a structured impact assessment with prioritised test scenarios, not a forwarded release note.

Beyond quarterly patches, our managed service provides ongoing operational support for your Oracle environment. Configuration changes, incident investigation, knowledge transfer, and continuous improvement, delivered on a subscription basis with defined response times. We become an extension of your team without the overhead of permanent headcount.
